Sharp-shinned Hawk nest
Chestnut Ridge Park.

May 15 & 20 T. Bourne encountered ♂ which 1964
swooped at him several times and called repeatedly.

May 25 T.B. and R.F.A. visited locale and ♂ performed same manner, coming in very close to me twice, but not striking. Evening with gradually poorer light conditions - did not discover nest.

May 29 R.F.A. & Chris & Beth - ♂ spotted could feel wind from very wings as she dove by but the same and also heard ♂ calling - a lower pitched kek-kek-kek etc. she did not strike & stood beyond & finally called as I neared nest level
Located nest about 30' up in spruce (planted) in small section of 40-50' pines & spruce with scattered large sugar maple & white ash & tamarack & smaller deciduous trees & bushes at east side of grove.
Grove is bordered on south by deep ravine and a maple-beech-birch woodland with a few hemlocks. Grove is in southern part of west section of park bordering park road. Compost On west side of grove is clearing with picnic tables & few smaller evergreens. Farther west is an

other side of clearing one more evergreen + deciduous ca. 2' diam 1' thick
Nest is bulky, made of various sized sticks + twigs with a slight 30
depression in which are the 3 egg-
oval white heavy brown flecking (concentrated on one end in one egg) on a pale
bluish-green ground color.

4 June - with T.B. + V. Borle.
still 3 eggs. - both parents attacked but did not strike me. A large feather rept. to eggs on nest. Took two flash photos of N + E. and one non-flash of ♂ Both ♂ and ♀ perched in nearby trees at general nest level. & kept up calling. Nest tree has dead or medium branches almost up to nest level with only a small ante of medium size section of tree, but thick foliage above

11 June with T.B. + Mrs. Rochester
none one egg and a downy young 3-4 days old ca. 3½" long. They occasionally raised their heads up to look about. Nest lodge Nov about 6" away from trunk & largely

supported by two branches 2.5-3" thick.
This evening the parents were not around
when we went under nest (apparently
off hunting) but after about 3 or 4 minutes
3 flew in calling. Both adults con-
tinued calling & flying about in
adjacent trees all during visit (about
½ hour), but made no direct attacks
and kept several yards distance at a
minimum. Two primary feathers below
nest on ground, but no whitish visible
except in scattered areas of grove. Took
four flash photos of nest after clearing
obstructing pine branches.

19 June nr/TLB.
Two young hawks now almost twice as
large as previous week (ca. 6-7") - still
down-covered. Egg has disappeared. No
evidence of grey or whitish on nest or
ground. 3 called + attacked repeatedly
as soon as entered grove in vic. of
nest. One was more aggressive than
ever before + could feel wind from this
several times. Came to within a few

circles from TB + D, but never struck. Also attacked as I climbed but ceased as I went higher in copse of bracken. ♀ appeared + called (dog-like) but did not attack. Flash not operative as took rest of reels - about 6-7 pictures, 2 of nest from below + rest of young. They came out dark (young) but nest pictures came out alright.

26 June - 2 young now 8-9" still mostly down - covert but with pin feathers coming out on wings and tail. One young gave weak Kek-kek call like adults, and repeated it several times. There is now a small amount of white on ground + brackens near ground below nest. No evidence of prey. No adults evident when we arrived (apparently out hunting). ♀ arrived as I climbed tree but only attacked once + then did not come within several yards. ♂ kept calling and stayed 15-40 yds away + I could

not approach him. Took 4 flash photos of YN and one normal of RFA below at observation point. One young began

3 July 6:15 AM – both parents come in, particularly male in persistent attacks, never striking but coming fractions of an inch away. Male was so aggressive that he followed me across road almost to car. ♂ perched many times as close as 10-15'. Both called repeatedly and less frequently ♀ occasionally dove in as I sat to take notes about 25 yards from nest tree. One young bird was out of nest and perched in climbing pine about 4' from nest. The other bird was upright in nest. YO was about 3/4 size of adult and now had many feathers on body & wings with tail about 1/2 grown. Bits of down feathers evident on branches about nest. When I climbed pine both young flew, and landed (1) about 25' from nest in another pine. Could only locate the one after much searching in which both adults called and attacked but less frequently. The one young I found flew about 120 yds. pine when I shook tree on which

it perched. Then I started it again from low branch (15' up) of dead tree & it flew circling but ascending about 75-85 yds dead ~~tree~~ returned to large tree high up. Took several pictures of ♂ & the one young bird. One egg still in nest.

4 July - both birds calling in ravine. ♀ made one distant pass in front but mostly they sat at distance & called. ♂ had remnant of prey in talon. may have been bird. ad
La. Water Thrush feeding 4 YN - 5-6 dozen ad ovenbirds earth thrush along bank of stream in ravine.

5 July 7:30 AM 1 young sitting on nest, other in spruce about 2' from nest; after few minutes it too moved onto nest. Red Squirrel came into climbing zone to within 8' of nest & then sat and chattered some. One young hawk flew out of nest, hopped to squirrel & perched in front. Squirrel retreated several feet & then went away & scolded. Other smaller young moved out of nest a couple feet. ♂ called & came in nearly. Young will feed with patches
& also female

of down on head. Tail about ½+ grown. At 11:30 ♀ could not come back on nest + parents ♂♀ made 2-3 passes at Clive. Took one picture of young bird + some of waterfowl N of Y.

8 Aug – ♂ called + came in near nest but nest empty + no sign of young.

4 September 1964 – Con. shore w/ Thill + Log.

McCarty Hill

50

10:45 - 1:45

May 13 - Deciduous trees at McCarty Hill partially in leaf - perhaps 1/3 - 1/2 in most larger trees. A cool clear, fair day with fresh N-NE wind. Bird song was not in much volume or abundance, but was rather subdued. No nests found but Robins may have one near tower. Evidence along East downhill trail of squirrel(s) (Red?) eating pine - spruce cones. Many non-biting insects.

Chiapas Expedition 1967

2/6 Mon. 7:30 EST - AA (727) to Chicago where waited to 1:15 PM CST for AA (720) to Mex. City - arrived 5:30 PM CST, 3.5 hrs. late. (Chicago cloud day before so plane from L.A. not able to get in in time for 10 AM departure for Mex. City. Above clouds much of the way, but at times could see Gulf Coast - Tex. - Mex. Night at Pola Villa

2/7 Tues. Had about an hour talk with H-Corzo, then tried to get equipment (finally found it at customs in PM) out of customs, but they close at 2:30 PM.

2/8 Wed. In AM got equipment out of customs & arranged for shipping to Tuxtla G. the next AM. Visited Beltran for almost two hours and then was too late to get maps from D.G. de Geog. y Meteo. Visited Anthropol. Museo for almost two hours & tried to reach Phillips, but could not

2/9 Thurs. 8:45 AM plane for Tuxtla via Minatitlan (clouds in & North) left at about 8:45. Arrived T.G. about 11:45 AM where Miguel & Bonifacio picked me up. Equipment delivered later.

repairs on
Relayed in PM. Rover not finished.
2/10 Friday Visited zoo, wrote letters, read
Tikal - Smithe book and talked about
forthcoming field work. Only news info.
Miguel Ruiz is apparently about Santa
Cruz de la Laguna above Cerro Grande &
Escuintla. This glaciologist who came in
last week said he saw five H. G.
in one fruiting tree. Miguel apparently
does not want to go to Guatemala or even
Tacana, so we decide to go in at Laguna.
I hope it produces enough birds. It seems
as it seems to be close to large, high
possibly unexhibited area running from
Cerro La Bandera eastward to Cerro
Paschtal and Cerro de San Miguel. Area
is higher than El Trunfo on the average
more area above 2000 m. & peaks to 2700-
2900 m. or possibly more. Norte warmer,
2/11 Sat. warmer - prepare equipment
and pack. Rover is supposed to be
completed today (I hope). Miguel will

send telegram to Mayor of ~~Acacoyagua~~ Acacoyagua from Sec. - Governador to arrange for horses. Hopefully we can get Rover today, try it out locally today & on Sun., pack & leave Monday for early Tues. start for Sierra. Won't believe this schedule until it occurs. Birds around house:

Black Vulture	Bald. & Orchard Orioles
gray. Zone-t. Hawk	Fawn-br. Hummer
Berylline Hummer	Warbling Vireo
Social Flycatcher	Yellow-thr. Euphonia
Melodious Blb.	Gr.-t. Grackle
Bronzed Cowbird	Inca Dove
Tropical Kingbird	Summer Tanager

Miguel has captive -

Spotted Rail	Thick-knee
Ruf.-n.-c. Warbler	Olive Sparrow
Wh.-coll. Seedeater-sp.	2 Bl.-h Grosbeaks
Gr.-t. Grackle	

Tuxtla G. altitude 550m = 1774' (1805')

4:20 PM still no Land Rover - but promised for late today or early tomorrow. maybe will be today No Rover by day's end

Black-c. Warbler Clay-col. Robin

2/12 Sun. fair, breezy, lt. rain-drizzle-mist northern. Examined trailer - looks good enough, altho rusting somewhat & tires ought fair Wh.-c. Vireo - 300 and - Blue-Gray Gnatcatcher 9 Ruby-th. Hummers 5-6 Cedar Waxwings - stable no Land Rovers by 4PM. - 6PM

2/13 Mon. - cool night, down to probably 60° or lower slightly. A breezy, cool, mostly cloudy morning - northern in full swing. Later partial clearing, windier. Word came that L.R. will not be ready until Tomorrow at 4PM.! It better be as can't wait any longer - already have lost almost a week here and in Mex. City. Watched Streak-backed Orioles C

Harpy Eagles sat and observed Curassows & Ch. Guan - offered them tender leaves & they seemed to relish them, altho most Clay took only a few. Ot 11AM went to region shop with M. Motor is still out of L.R. & they were adjusting valves - also working on left front wheel bearing. This is a most wasteful delay in time, but usual for Mexico.

Grove-b. Ariz

2/14 Tues. @ Fair & cool night, wind dying down. Fair, clear & calm this AM with L.R. supposed to be ready by 4PM ??
Two men sent yesterday at 4PM by bus to Accompagna to arrange for horses etc.?
Prepared completely for trip. By 4-5-6PM no Land Rovers. Word came in that they were having trouble with the timing. So now we cannot leave today. Tomorrow something must be done and I mean definitely. This cannot go on like this. It is obvious that, at least as far as the L.R. is concerned, these mechanics are not competent. The only thing I can see to do is rent a truck, & I am going to do that tomorrow if I can find one. This delay & waste of time is getting unbearable.
Now Miguel's cold has apparently gotten worse (fever?) and tonight he took to his bed. It is even more obvious now that he does not want to go. If he had said this definitely early in our

They have [illegible] since last Sat.
+ have not produced.

correspondence, I would not have undertaken this thing at all, at least the phase of it dependent on him and his vehicle. In 1965 I could see that he was not very effective or efficient in some respects (too slow in doing things) (he is somewhat a dreamer and absent-minded) and this is even more evident now in his dealing with the vehicle repair people. His daughter bears me out on this. They have had the L.R. for over a month and their piece of work cannot be justified. It is very discouraging.

A calm, cool night, clear, temp to 50° or below

2/15 Wed. clear, cool., fair. The Toca Boca calling this AM may be right after all - "no hope." Yet, at 9AM they have motor running and it sounds quite good. They say it will be ready in three hours (12AM); then seems to be doubt. Angel is anxious to go. I still can't see us moving out until mid-afternoon. I hope that we can get home at Acacoyagua for sure tomorrow if only we can get there tonight. At

present, I will go alone with Bonifacio, Angel and Primativa. Rosendo is opposite at Acacoyagua. Then Bonifacio is supposed To return and bring back Miguel when he recovers, supposedly in a few days, but I wonder whether he will come at all. Perhaps his complaining about the cold in the Sierra is merely a cover for a more deep rooted aversion to going in the field. Of course he is not so young anymore & this may be a factor also, although he seems to be in pretty good shape.

I surely hope that Santa Ana de la Laguna proves worthwhile and we find enough birds even if we rest. Lloyd R. is at last ready by noon after I visited shop three times.

We decide to set out late this evening so as to arrive at Acacoyagua by early A.M. Miguel's "secretary" visited Acacoyagua and people there told him that there were geese above Cerro Oxonda and that we could see them easily ??

Apparently this Laguna is not the one reported by man recently who said he saw Gold grass in the trees - this may be west of El Triunfo.

By 7:30 PM trailer & L.R. are packed and we are ready to move out. A clear, fairly warm night, slight breeze and quarter moon waning. We leave at 9 PM.

2/16 Thurs. After uneventful trip we arrived at 80 m. (160) Acacoyagua at 4:30 AM to find Rosendo who said that they had 14 horses ready yesterday! So the L.R. delay has again fouled up the plans. We arrange for enough saddle horses to go on this AM plus two mules for the bags. The hope to come the following morning. Man here who seem to know mountain says there are quite a few grouse & hunters come back with them every time they go out.??

Orange-fr. Parakeet
Orange-ch. Parakeet (short-tailed)
Yellow-w. Tanager
Wh-fa. Parrots
Tropical Kingbird
Cinnamon Hummer

Acacoyagua - Land of old men. a typical small lowland town (humid)

By 9:45 am is getting hot. Vultures soaring. Small dark hawk; Lots large hawks - one at least white head - soaring over Sierra Tzontalez. Plumbeous Kite

Seven persons now in party:

Miguel	Primitivo
R.T.G.	Rosendo
Bonifacio	Margarita
Angel	

Gray or Roadside Hawk Yellow-w. Caciques
Green Parakeet Maggie Fly
Ruddy Ground Dove

Later in AM fresh southerly winds, mountains hazy through gaps to west.

By 11:20 AM horses are brought in (5) but still more delay and not enough horses.

Alberto Gutierrez Jefe - Hacienda Hoy Toscana

Al Cerrito - Huberto von Knoop -
Apdo 58 15-85-
Tapachula Chis

So we get off going in once more until tomorrow early AM. Dismount in PM

with Ignacio to Tapachula where talked
with Ferdinand & also Mrs. von Krosigk
She said there is road beyond Union
Juarez, possible to Tequisiapa - passable
by jeep. Visited airport but found
only Stearman & Piper (64?) available
for rent (~300 p./hr.)
Sr. Villasenor - pilot of Piper.
L.R. trouble again - not getting oil
(airport tubes put in incorrectly so hole
blocked and tubes worn). Had them
taken out & replaced correctly,
so will apparently be okay for a little
while, but must eventually be replaced.
Back to Acacoyagua by 7 PM & calm,
clear - hazy night in municipal lldy.
Cr. Caracara. Spent a rather poor
night - dogs, chickens - much noise.
clear, warm
2/17 Friday Muleteer came at 7:30. He
has not seen any grass above and
has traveled the trail eight years!

We decide not to go any after much discussion & plan to return to Tuxtla & leave for U.S.? Don Miguel will collect for a few days around Majosteyec.

Mexicana - Isabella Castillo - T.G.

Left Acayagua at 11 AM & arrived Tuxtla G. at 5 PM after stopping at Mexicana Aviación.

2/18 prepare to leave T. G. 11 AM plane. —
Arrive Buffalo 12 M. ride & garage .80
lunch - 1.60

May 7 - Red-t. H. nest at Lewiston - 10 AM - cliff
no trace of Peregrine in gorge. 35° clear, fair
1 ad. Red-t. - two young still downy with wing feathers still sheathed - about 1/3 grown
ad. present, young moved about + periodically flapped wings considerable whirling on nest stacks. Ad. made motions as though to preen one young. Every so often young raise up + move about but ad

kept down on nest. Adult slightly spread wings to shade young near noon. No sign of other ad. after noon. Small particles of entire supporting nest seem to be arbor-vitae. At 12:15 other ad. flew in with a medium size rodent - squirrel or rat + 2 young immediately began to feed on it. This ad. stayed only a few minutes + then flew off to N + began to soar.

May 8 - 1 Cerulean W. - Evans

May 9 - 1 Lincoln's Sp. Lakeside Cem.

May 21 - Red-t. H. nest-gorge - Power Plant 9AM - 11:30AM about 270' above river. Ad. + two young on nest. Another adult soared over gorge + along edge + alighted in tree on Con. side between nest + Arbor Beach station. YN now have considerable feathering - wing + tail feathers ½ + out. - Ad. tearing up frog + feeding young. Considerable whitewash now on nest and on cliff at left side where ad. often stands. Other parent called above power plant (U.S.) + gorge on more closely + soon occurred ca. 11 AM. Other ad. flew off nest about 11:05 + YN preened + stood up.

I judge these two young to be about 5 weeks or slightly older and should fly in a week to two weeks. Gorge here appears to be about 200' deep with crest about 30' below crest & 180' above river.

1 Varied Thrush ♂ 1684 Ruie St. in North Tonawanda (Mr. Donald Graf) This bird has been coming to feeder area on N side of his house for about 2 weeks. It came in at 8:58 AM so we got good views of it, but it left a few minutes later. Found it again in Jagle tree behind # 1662 at about 9:45 & photographed it till about 10:20. A bright male apparently feeding on old apples in various trees about yards & visits Graf's feeder & also feeder across street (they put out apple pieces, but it also may eat seed? Photographed it from about 40 - 18' away.

About 6 Morning Doves & 4 Robins are also in the vicinity; also a White-throated Sparrow & Cedar Waxwings. (Clark)

Jan. 17 w/ Pat (lt. snow all day; mild)

May 26 - to visit L-e. Owl & nest at Jos. Hamer's land on Versailles Plank Rd. (Pontiac-Utica Rd.) Evans Twp. w/ Bourne & children. N 5 Y about 1 week old. 2 adults were ~~not~~ perturbed. ♀ brooding when we arrived. Nest in pine grove about 25' up and about 5-6' from tree top. Large grove of Pines about 20 yrs. old. Nest of sticks, bark lined, pine needles, probably old crows nest. Young with grayish down plumage, wing feathers out slightly. Adults flew all around close uttering ~~a~~ variety of calls, but did not attack or come closer than about 10-15'.

May 31 - to L.-e. Owl nest again & photographed young. 5 Y N

June 7 - To L-e. Owl nest

found 3 Yo perched 2 (high) above nest level in nest tree (one) and in adjacent tree about 20' from nest. Third Yo was

June 1 - Too poor visibility (rain, fog) but ad.? Red-tail on ~~ghg~~ nest - Eden Bird plant about 7' off ground on horiz. branch at trunk of pine about 60' from nest tree. Homer has found at least 4 + possibly 5 of the young which apparently left nest about June 4 - or 5th. They are still mostly covered with gray down feathers with wing feathers well out but not nearly full. Birds cannot fly. + tail is rudimentary.

June 10 w/ Homer to L-L. Grove, Eden. Stayed till about 10:30 PM. Found 1 Young bird perched in N section about 40 yards NW of nest site - perched 4½' above ground on horiz. pine branch. After dark it moved several feet to about 8-9' up. Both parent birds were about + calling, especially when we were near the young bird. At dusk one adult sailed around above us over fields east of grove + over pond; it perched two or three times in tops of pines with ear tufts almost flattened on head.

After dark the young bird and another one about 10 yds SW uttered a weak whining or mewing call several times as the adult kept up a whoup! whoup! call close by.

In field to east found Field Sp. N4E on ground (scattered shrubs & small trees about) - flushed bird from nest.

Two Woodcock calling & in flight song.

At least 4 Henslow's Sparrows & 1 Grasshopper Sp. singing in fields to N E & S E of first area.

June 14 1 Y-th. Chat - 5 Lakeside Cem. (also flight song)

1-2 ♂ Blue-w. Warblers

1 ♂ Brewster's Warbler paired w/ ♀ Blue-w. Warbler - Lakeside Cem.

N 2Y + 1 cowbird Y (removed cowbird) nest in shrubby opening (2-3 days old) close to ground woven around stalk of herbaceous plant among poisoning plants near shrubs.

Field Sparrow N4Y about 3-4 days old. on ground in open area of scattered shrubs & trees

2 ad. Short-e. Owls + 3 almost full-grown young that could fly fairly well. In grass + herbaceous plant field, s of Ernst + E. Higa Sts., Lockport, N.Y. 164
Ad. owls, particularly ♀ called when young were flushed from herbaceous plant clumps. Pellets on ground where young were roosting. Old orchard near where one ad. + young flew. Ad. male mobbing, unsuccessfully, sparrow hawk. Many old fields w/ few shrubs, and two or three large dead elms + a number of shallow mint ditches.
Savannah Sp. N4E on ground in low grass edge row.

3 Barn Owls - at Grentzinger's barn
5 Creek Rd., 3 YN - about 4 weeks old
1/2 - 2/3 grown.

June 14 1 Loon in small pond - off Clark St, Hamburg nr. Maine Sh. w/ Bacon, Kreutter, Mrs. Wagner.

June 16 - Loon at Clark St. Pond w/ Hauser. Bird captured by Wagners & died (pneumonia?) later in PM.

June 16 - 1 Brewster's Warbler singing at Lakeside Cem. Nest deserted & empty. - woven around stalks of N.E. Aster.

1 ♂ Gold.-cr. Kinglet S.

Kinglets prefer large spruce (Norway or White) densely set or solid canopy & intertwined branches exist. Only once has a bird (S or) been found in other than this (M. Dixon Rd. exit.) - this Kinglet was in tall Red Pine - Spruce mixed forest with some deciduous trees. It may have been

a wandering bird - perhaps solid spruce nesting. Kinglets may enter pines at edge of spruce area. Spruce trees can be variable in size (as at Terwilliger), but the more uniform they are the better for the kinglets. Make tend to sing from high in the spruces, near the top (3-8'), but they also may sing at any level down to 4-5' above ground. Are some of these tall singing perches used habitually? The ♂'s usually seem to sing from one spot, but sometimes move about tree tops or from tree to tree. Spruce plantations in which kinglets are resident vary considerably in size - from many acres down to 2-3 (as at INWR). All areas so far are either fairly extensive and usually bordered by pine plantations or deciduous forest. Probably the kinglets might not take up residence in a very small spruce section bordered entirely by open areas.

July 11 6:25 PM - 1 ♂ Wh.-w. Crossbill came to drink in bird bath! Saw only 1-2 sec. Heard call notes of 1 +? in cone of full torches to E.

July 31, 1969 7:15 AM – 7:45
1 ♂ 1 ♀ White-thr. Sparrows in shrubs of formal landscaping in front of Bfo. + E. Co. Library (Broadway & Washington Sts.) in down town Buffalo, Male seen by F. Rea (et al) since mid-June + ♀ first seen by her on 7/30/69. As soon as I arrived today I heard ♂ singing & saw him well. Also saw ♀ fly to Church St. side of area & then back to Broadway side at NW corner of library into some clipped hedge (privet). She was carrying a

large lace-winged type fly. I went over to hedge after a few minutes just after she had emerged. ~~Immediately~~ one fledgling flew out (stub-tailed, probably out of nest 2-3 days.). Then flushed another young of same size. Adults very agitated + calling. Returned 8:20 to see both ♂ + ♀ (min. 8') ♀ kept up rather agitated calling, but ♂ fed + sang repeatedly. ♂ chased ♀ about + sang in between. ♀ caught another large lace-wing fly + went to priest to feed young. ♂'s favorite Song perch is 8' thorn apple (hawthorn) tree in center of area. Both birds called often - the characteristic tsk-tsk! and later one (♀?) gave the long call several times. Bird (♂?) has also been seen on shrubby square monument across Wood St. about 75 yds. away. Library area is large grassed with central ~~oval~~ rough grass area + triangular grass area in front of building. Other thorn apple near NW corner of library is also ♂ song perch. Shrubbery in rows bordering concrete + walks. Volume

and arrowwood + juniper glen privet + tatarian honeysuckle
Left area 8:45 AM.

1 Com. Eider - Welland R. - Chippawa
ice bridge - formed late this year - milder weather - first real zero weather not until about 18 Jan. Quite a few half-hardies remained this winter, especially Wh.-thr. Sparrows. On Jan. 10 a SW wind broke up thin ice in L. Erie and sent it downriver in PM so that from above Peace Bridge to vicinity of Strawberry Is. the river was almost solidly covered with crushed ice. This caused a mass exodus of ducks downstream to avoid this ice jam. Apparently later this ice moved downstream and probably contributed to the formation of an almost complete ice bridge in the gorge below the falls a few days or two later.

March 22, 1972 - w/ Pat to Port Hope, Ont.
Found Great Gray Owl near Dale.
Watched it from 5:10 to 7:00 PM
as it hunted - first seen about 25'
up on large Norway Spruce branch
& then on ground, posts, top of smaller
cedar, apple tree as it flew about.
Did not see it catch anything.
Seemed on small side, possibly a
male. Often let its wings hang
as it perched, or let tail dangle
Ruffs spread in wind - floppy.
Excellent views from 50' to several
hundred yards.

March 23rd picked up 8-10 day old
Gt. Horned Owl found in snow
below nest tree in woods off
Taylor Rd., near 18-mile Creek. Found
by Mrs. Hundley. Possible broken
leg, otherwise in good shape. - eats
well. Bird probably blown out of
nest by strong wind of night before.
Mrs. H. says nest appears flimsy.
Adults about but no other young owls

March 23 1 Snowy Owl - alighted on light over Fairmount Blvd. Expressway (Rte. 5) opposite small boat harbor.

March 25 1 imm. Cooper's Hawk - over 19-Mile Cr. woodland N of Taylor Rd.

Nov. 29 w/Byron - first clear (cool)
sunny day in long time - it has been
a wet, cloudy, cool-mild, changeable Oct-Nov.
1 PM - Gyrfalcon - gray-dark phase
Nia. R. Parkway, Ontario, 1 PM at
2nd Service Rd. mouth of Frenchman's Cr.
about 3 mi. NW of Fort Erie in

My first wild & free Gyrfalcon
Bertie Township. Bird flew from river road
(possibly perched in tree) west between
houses (low) and to N for a couple
hundred yards to perch on a telephone
pole where we had excellent views of
it in good light for several minutes
when it flew NNW rising over woods.
About 15-20 min. later I spotted
a bird high up moving northerly from Bowen Rd. &
then soaring — very likely this bird
as shape seemed similar - but per-
haps not.
1 Com. Loon - Gorge - Falls
1 " " - west river considerably above Navy Dr.
1 ad ♂ Harlequin Duck - gorge - 2:30 PM
1 Rough-l. Hawk - over Bertie Twp., Ont.
Dec. 9 1 Harlequin Duck - Nia. Falls gorge w/Bobby
Dec. 11 - w/Clark - Nia. Falls above
off Montrose Rd. many Herring Gulls
probably 1500+

1 ad. Kumlien's Gull

1 ad Gr. Bl.-b. Gull 2 ad. Glaucous Gull

1 poss. hybrid Gr.-Bl.-b. × Herring G.

1 ad. Herring Gull 1:15 PM – aqua streamer on rt. leg and orange dye ring on neck. Gull adult, slightly larger than Herring G. w. more massive bill.

Dec. 11 1 Sh.-sh. Hawk ate a bird (Starling?) under evergreen in our yard.

Dec. 14 w/ Clark – Nia. Falls dump (Ont.)

2 ad. Glaucous Gulls 1 3rd w. Glaucous Gull

1 2nd w. " "

warmer, calm – gulls very skittish, soaring

Dec. 22 w/ Bowne

1 Nor. Shrike – Derby (Jerusalem Cem. Rd.

Dec. 25 – w/ Pat – Nia. Gorge – could not locate possible Sawwhet's Hawk seen yesterday by Benham, Sabiston.

Mr. William Kerr – Plant Supt. of Sir Adam Beck plant – Ont. Hydro

Dec. 27 w/Clark to Montrose Rd. dump (St. Davids) & Nia. Gorge. - mild, cloudy, light snow

1 ad. Lesser Bl.-b. Gull on field 2.5 mi. SW of St. Davids - W of Montrose Rd. 11:30 - 12:30 PM.

4 Glaucous Gulls - dump area & field ad. & 2nd yr.

2 " " pomplants subad. & 2nd yr.

1 ad. Thayer's Gull - on dump field - mirror black

1 subadult Iceland Gull " " partial mantle, appeared to have pale brown bar on primaries - kumlieni?

Lesser Bl.-b. Gull was full adult - dark mantle, smaller than Herring, yellow-belt, deep red gonydeal spot, yellowish-dusky or greenish legs & feet. No mirrors apparent on wing tips when it flew. Fine head streakings. Similar to my 1949 bird.

Dec. 30 1972 w/Bourne - Christmas Count

1 Chipping Sparrow - imm. 10:30 AM 50' Mt. Vernon - m. Rte. 5

1973 (1)

March 7, 1973 - last of ice going out of L. Erie - comparatively little formed & not thick. One of earliest breakups ever. warm, southerly-east winds

July 29 w/ family
1 Dunlin - Erie Beach, Ont. 10:30 AM

260

July 31 7:30 AM — Shelton Sq.
(St. Paul's Episcopal Cathedral
Cathedral Park

2 ad. & 3 YO White-thr. Sparrows. young full grown

105 yds. - along church X 25 yds wide to 20 yds. 1.5' hi low concrete wall beside church EN E-WSW

concrete 12 loops w/ trees in

8' width betw. wall & church - Euonymus gr. cover

20' high Sycamores (23) (37) 20' - poplars natural chip bases

(4X4 stone filled □) (2X2 stone filled □)

4 12 15' crabapples at ENE end

12 concrete loops w/ 2 10 15' trees each. Euonymus gr. cov. - wood chip bases (bark)

3½' H X 4' W X 8' L. 1 crabapples

5 walks along church between buttresses 12' X 5' W X 4" D.

ground cover several 3-4' Forsythia

proje - 2' h., 3' long 3.5' from mast 12 cm D shrubs intermedia

2 ads - 1 white morph, 1 brown morph. interspersed.

Saw white ad. feed a Y twice. They were very tame - approached ad. & young to 4'±

Adults gave both calls - alarm & beg.

Young fluttering for food - begging call.

(2) O & YN

(5)

& crabapples - NW corner
& ENE

They did not sing. Fed along sidewalks, in wells, in EJ's + hedge bases across streets. Also on street + 8" sq. pine tiles of garden. Concrete under 23 # ENE sycamores, 10 birches (to 5') along main part area (fence) also small lawn ground shrubs to 2' - Cotoneaster Juniper sp. ( ) up to 50' (av. 30') on walk, (7 + 6 benches in park (13) move cross 24 yds sp. 8 lts. along side 1.5 x 1.5 x 8". side " " 20

Also perched in trees in loops + in shrubs along church, also on 40' buttresses.

Found nest on ground in 8' wide area next to church (10 AM) partially below ground level in wood chips under Euonymus bush. There were four young about 2 days old still mostly naked with some hair-like down (sparse).

1250' SW of library location

Heard young give trilling calls or being fed on several occasions while I was there.

From Rex's at noon, saw birds and heard young.

Aug. 1 ♀ Amer. Widgeon with 5 young about 1/4+ grown - Times Beach
1 Oldsquaw (goos. summer plumage ♂ changing)

Aug. 2 0.5 Shelton Square w/ F. Rew & C. Burke
6:45 - 8:45 AM (photos taken)
Found nest empty (Wh.-thr. Sparrow) with 4 young gone and presumably ♀'s feathers in circle about 10" from nest on ground. Nest about 5' from wall, 3' from well wall & 30' from light. Collected nest & feathers (most of them). ♂ singing frequently 6:45 - 7:30 from ground & also about 15' up in sycamores where it stayed for part of time. Only two fuzzy blood young visible; apparently third also missing. Sexton-attendant said birds there in '72, '71 + before(?) & lady from building across street took young & nest in '72. Plaque dedication Oct. '71.
(least Fly. flew in to SE corner of church at roof edge & perched on ivy, caught one or two insects & sailed off from MST plaza direction.

then flew up high across Erie St. to
face of old Weed bldg. & appeared to
catch insect along wall about 100' +
up, then flew high toward M&T. Plaza)
Wh.-thr. ♂ made several sallies from
wall edge against ivy on wall, pre-
sumably catching insects, also fed
along wall & ascended ivy from
ground level 1-2'. But mostly fed,
presumably w/ young (2) near on
ground. Also perched on Rain-
pipe several times w/ & w/o 1 young.
Did not feed young. Destruction of
young and presumably ♀ occurred
sometime between noon on 31
July and 7:00 AM on 2 August.
Nest construction - an oval open cup
set in the ground cover of bark chips
under several branches of euonymus
plants. Max. nest diameter - 17 cm.
max. cup interior diameter 7 cm.
depth cup - 2.5 cm.
max nest depth 5.5 cm.
fairly shallow

A loosely interwoven nest composed of ~~mainly~~ dried grass stems, plant & wood fibers, bark strips, rootlets, weed stalks, the interwoven & constructed with a finer pale yellowish type of dried grass which contrasts with the darker brown of the rest of surrounding nest materials.

Aug. 2 w/Byrne - 2 Bl.-b. Plovers - Erie B., Ont.
Aug. 3 2 Com. Gallinules 7Y0 (small downy)
1 Stilt Sandpiper - Times Beach
Aug. 4 w/Clark - Shelton Sq. + Times Beach
1 Yellow Warbler 1 Sh.-b. Dowitcher
5 Amer. Wigeon - TB 2 Gadwall
6:45 - 9:30 AM - 1 ♂, 2 imm. Wh.-thr. Sparrows
♂ singing sporadically Shelton Sq. - St. Pauls
captured 2 imm. with mist net + banded
could not catch ♂ - eluded net.
imm's very tame - could get to 1-2' (they came close of their own accord. ♂ frequently went up in ing + fed on insects 5-20' above ground.
♂ also went up + sang from 45-70' buttress peaks + nave crosses (singing perches). Dt also sang from sycamore + foraged there with imm's. Once it flew across Erie St. + alighted on top of savings + loan bldg.

Aug. 5 - O.O. w/ family (3 boats boated) Louth creek
2 Com. Egret 1 NWR - Twin. P. - cr. Cormorant

July 24 Nia. Falls – Times Beach

6 Lsr. Yellowlegs – NF – 8 Semip. Sandp.
18 Bl.-cr. N. Herons over 50% young.
ca. 50 Herring Gulls on cliffs, ledges & talus of gorge below Goats Island
ca. 20 large young there also, most at or near water edge, but 4 (incl. 2 not fully grown following parents) on cliff ledges & talus. ca. 25 adults flying off cliff. = total 75 adults.
1 White-w. Scoter – gorge – Com. side
3 Com. Merganser
little diff. at TB – few Lsr. Yellowlegs, terns, 1 Mallard, few Semip. Sandp.

July 25 - w/ Clarke + Burke
Nia. Falls.

Observed Herring Gull breeding colony in gorge at west side of Goat I. About 15 cliff ledges possibly suitable for nesting. One + two adults with a nearly full grown young on one ledge about 50' up on cliff. Much whitening on + below ledges. About 3 ledges are large enough for possibly 2 nests each. No nests actually seen for sure (except from Ont. shore) on ledges + only one possibility. About 25 birds (adults) perched on cliff ledges, about same no. on talus. Two nest mounds seen on talus below cliff, one had adult on it. At least 6 large young swimming about in river at edge and one on talus below cliff begging food from parents. Gorge about 100' deep, talus (partly vegetated) from river about 80', cliff ca. 60 slope (vegetated) above about 25'

Aug. 20 w/ Clark, Burtt, Semlitsch to Military Rd., Kenmore. (1144)

1 Monk Parakeet in past several weeks has built a nest of sticks, (hawthorn etc) about 4 X 1.5=2' (1.8 x .48 m.) in dimensions horizontaly under eave of factory bldg. on power wires junction bet/ bldg. about 18' above ground. Old Robin nest was in it previously. Entrance from end (E) lengthwise. Bird is scarcely ever seen around nest. Probably some on reported on Shepard Ave. across street. Factory people

(13)

313

Any parakeet feeds sometimes on haw + apple fruits in grove to N of factory. Many apple + haw trees about neighborhood across from factory. Found a somewhat shriveled ~~[illegible]~~ small apple in nest. One or two feathers of parkeet also in nest. Conservation (NYS) Technician 2-3 weeks ago shot at parakeet with pellet gun but missed. Factory people say bird has not been at nest lately + possibly birds have pulled down and ate it by getting up on roof. at nt. [illegible]

rain heavy Sat PM + breaking S.m. Pat, Bobby D. ot, Marcy Brook
2 Boreal Chickadees - Whiteface Mt.
no other northern species. Visited Chubb R., also Bloomington Bog. (good boreal area)
Whiteface + Madawaska (extra time),
2 Parula W.s - Chubb R.
2 No. Waterthrush - Bloomington Bog.
Nashville W.s Canada Warblers
Bl.-t.-wh. W.s Purple Finches
1 Brood-w. Th. Blackpoll W.s + S - Whiteface Mt.
Pine Siskins - Whiteface Olive-s. Flyc.
Solitary Vireo

June 30 Times Beach 8-8:45AM
15 Lar. Yellowlegs 1 Gtr. Yellowlegs
8 Killdeer 20 Least Sandpipers
3 Short-b. Dowitchers 1 Semip. Sandp.
3 Am. Wigeon 17 Mallards
1 Black Duck 5 Spotted Sandp.
60 Com. Terns (feeding a number of young) sev. Ring-b. Gulls

July 1 - Times Beach - windy
1 Lar. Yellowlegs 3 Am. Wigeon
1 peep 1 Mallard
1 Barn Swallow 3 Spotted Sandp.
2 Killdeer water well in over silt flat into vegetation - probably 1/4 more of area covered by water, no mud area exposed. 20 Common Terns

July 2 Alleg. St. Park + Birdsall, Alleg. Co.
Cool, windy, fair Pat, Dot, Marcy, Jim G.
Ruby-cr. Kinglet ♂ ♀ + nest! 50' up in Norway Spruce on small island SW corner Red House Lake. 8:30-12M 5-50m. feeding young in nest. Seen first on shore in front of admin. bldg., + flying

flying to & from island. Rented canoe & went to island where Mary climbed spruce after ♂ seen to go into food twice. Came in twice more when Min tree. ♀ also in spruce (seen twice by P.) ♂ sang low song several times. Nest concealed about 3m. out from trunk under branch & enclosed & supported by pendulous side branches. Nest 5-6" oblong & deep, woven of grass, etc.

1 Parula Warbler S - Red House - front of admin bldg.

Bicknell Goshawk nest - two large young - at first one in nest, one perched nearby. Later smaller one left nest & perched nearby & larger one (♀) disappeared. ♂ came in to nest once carrying food but immediately flew off. Adult ♂ came in near road as we were about to leave, soared, called repeatedly & perched in woods. 2:30-3 PM. No trace of actitis in Longwood A. or Red-sh. Hawk nests in vicinity.

Many birds feeding YO - 1 Brown Creeper S - Kingbird, Redstart Blackburnian W.

July 3 - Wainfleet Bog, Rockhouse Pt. Morgan's Pt., Erie B., Three Beach. w/ Pat & Maty

Marsh Hawk N3E, N4Y, (3 flying → Wainfleet Bog.

Mallard N8E - Wainfleet Bog.

1 Lincoln's Sparrow S ← 8:45 AM seen only by R & M.

1 Dbl.-cr. Cormorant - Rockhouse Pt. - Gull Pt.

1 Horned Grebe - Morgan's Pt. 1 Least S.

2 Least Sandp. - Erie B. 4 Bonap. Gulls RH Pt.

12 " " - TB - 10 Sh.-b. Dowitchers
